

PRODUCT: NSF-04

Effective date: October 2021
Version 2

NUTRITIONAL INFORMATION

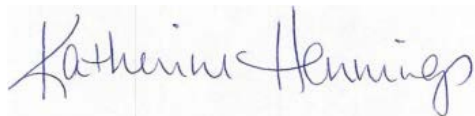

Nutritional Information	Amount Per 100g
Calories (kcal)	385 ^a
Total Fat (g)	0
...Saturated fat (g)	0
...Trans fat (g)	0
Cholesterol (mg)	0
Sodium (mg)	85.8
Total Carbohydrate (g)	94.8 ^b
...Dietary Fiber (g)	0
Protein (g)	1.1
Vitamin D (mcg)	ND
Calcium (mg)	14.6
Iron (mg)	0.6
Potassium (mg)	5

At typical usage levels in a finished product, this stevia ingredient does not contribute energy (Calories), fat, carbohydrate, sugar, protein, dietary fiber, vitamins or minerals of dietary significance for product labeling.

^aEnergy content: under current labelling legislation, we are obliged to declare the energy content of stevia products by applying the general energy factors (4 kcal/g carbohydrate; 4 kcal / g protein; 9 kcal/g fat) to the analyzed nutritional values. However, it is well established that steviol glycosides – the natural sweet components of stevia – are not digested, absorbed and metabolized by humans to give energy. Additionally, stevia is about 200 – 350 times sweeter than sugar and so is used in very small quantities in food/beverage products. Even if the stevia glycosides were digested and metabolized by humans, the amount present would contribute an insignificant amount of energy to the diet (approximately 0.01 kcal/100ml at a typical usage level in a soft drink). Therefore, stevia can be considered as a **ZERO CALORIE INGREDIENT**.

^bTotal carbohydrate: under US labelling legislation, carbohydrate is declared as 'total carbohydrate by difference' (total weight minus crude protein, total fat, moisture and ash).

ND = not detectable
